LOCATION
Rio de Janeiro, Brazil · Remote — full overlap with US Eastern/Central hours

## CORE SKILLS

**Power BI**

DAX (advanced) · Star-schema modeling · Power Query (M) · Incremental refresh · Performance tuning (DAX Studio, VertiPaq) · Row-level security · Executive & client-facing reports

**Power BI Service & Fabric**

Workspaces, permissions & deployment pipelines (dev/test/prod) · Fabric hands-on: Lakehouse, Data Pipelines, Spark SQL notebooks, Direct Lake models

**Data Warehousing & ETL**

Medallion architecture · Azure SQL / SQL Server (procedures, SQL Agent) · Azure Blob/Parquet · Azure Databricks (Spark, Delta Lake) · Amazon Redshift (dbt-modeled) · ClickHouse · MySQL · PostgreSQL

**Data Quality & Migration**

Legacy-to-new KPI reconciliation · Point-in-time snapshots & versioning · Root-cause analysis of metric divergences

**Python, Git & AI**

Python (pandas, pyodbc) pipelines · Git · Claude agents on databases and Power BI (MCP) · GitHub Copilot

**Ways of Working**

Stakeholders from C-level to operations · US client, 3+ years remote · Team lead (up to 4) · Jira · Scrum

## LANGUAGES

**Portuguese** — Native · **English** — Fluent · **Spanish** — Intermediate

## CERTIFICATIONS

**Microsoft PL-300 (2024)**
Power BI Data Analyst Associate

**IELTS Band 8 · Cambridge FCE**

## EDUCATION

**FGV — Bachelor in Business Management**
2014 – 2017

**FGV — Big Data & Data Science Executive Program**
2017 – 2018

## PROFILE

BI engineer with 6+ years building Power BI solutions end to end: from ingestion and warehouse modeling to governed semantic models and the reports executives and clients use. Built medallion data layers on Azure SQL and a Delta Lake lakehouse on Azure Databricks, the same foundations Microsoft Fabric is built on, and have rebuilt a full flow hands-on in Fabric. Strong at tracing metric discrepancies to their root cause and fixing them in the model, and at designing reports around the decision they support. 3+ years delivering remotely for a US client.

## EXPERIENCE

### Brightgrove
*Jun 2023 – Aug 2026*

**Senior Business Intelligence Analyst — allocated at RealPlus LLC (NYC real estate)**

- Co-designed with the CTO and built the analytics (gold) layer of the company's first data warehouse on Azure SQL: medallion architecture, Parquet ingestion via Azure Blob Storage, star-schema models over 11M+ listings and 14M+ user-activity events feeding Power BI.
- Built the Python pipeline bringing Elasticsearch user-activity data (7 indices) into the warehouse's bronze/silver/gold layers, so activity metrics could be modeled in SQL instead of computed ad hoc.
- Designed and began automating the weekly legacy-vs-new reconciliation (MySQL vs SQL Server) that a DBA ran by hand and sent as a static Excel file: SQL Agent procedure, point-in-time snapshots and a history of issues by volume and category.
- Owned the metrics layer: traced divergences between warehouse queries and production procedures to missing business rules and aligned definitions across systems.
- Replaced a basic weekly Excel attachment with an interactive trends report for a major NYC brokerage (Google Sheets, used by hundreds of agents): search, transaction, supply and luxury views with week-over-week, year-over-year and full history; automated 3 recurring DBA reports; audited the warehouse handover with an AI agent (read-only access) in ~3 hours instead of days.

### Homer — Proptech
*May 2021 – Jun 2023*

**Data Analyst → Data Team Lead**

- Architected the company's first lakehouse on Azure Databricks (Spark, Delta Lake, medallion layers), consolidating Mixpanel product events, Pipedrive and MySQL into one governed data layer.
- Built the analytics function from scratch: 15+ automated Power BI and Tableau reports for Product, Marketing, Sales, Finance and C-level; promoted to lead a data team of up to 4.

### Mobi2Buy
*Jan 2018 – May 2021*

**FP&A Analyst → Data Analyst**

- Structured the finance function alongside the CFO (P&L, cash flow, results reviews with C-level), then moved into data: funnel and cohort analyses and sales performance dashboards.

## CONSULTING ENGAGEMENTS

### NEES-UFAL — BI Consultant
*Jan 2025 – Present*

Public-policy data lab at the Federal University of Alagoas: Power BI reporting for nationwide education policies on a dbt-modeled Amazon Redshift layer (190M+ attendance records); implementing deployment pipelines (dev → test → prod) and managing workspaces, access and RLS.

### Rio Grande do Sul State Government — BI Consultant
*Jul 2026 – Present*

End-to-end data product for the state's public-safety program: data-collection design, a tool-agnostic semantic layer of 121 governed indicators across 11 departments, and the final dashboards.

### Homer — Analytics Consultant (part-time)
*Jun 2023 – Sep 2026*

Migrated segmentation pipelines from Databricks to ClickHouse and SQL Server with versioned, deduplicated monthly snapshot tables (RFM segmentation of 70k users).

### Todos Pela Educação — BI Consultant (project-based)
*Jan 2023 – Present*

Multiple projects across several directorates of a leading education-policy NGO: data-collection design, a metric system turning qualitative partner inputs into comparable indicators, and public Power BI dashboards (e.g. Educação Já).

### CEIPE/FGV — BI Consultant
*Jul 2021 – Dec 2022*

Power BI reports for the BNDES Educação Conectada initiative.
